Immunity Test Results

6.1 Performance Criteria Description in Clause 4 of EN 61000-6-1: 2007

Performance The apparatus shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified bythe manufacturer, either of these may be derived from the product description and documentation and what the user may reasonably expect from the apparatus if used as intended.

Performance Criterion B:

The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. No change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of these may be derived from the product description and documentation and what the user may reasonably expect from the apparatus if used as intended.

Temporary loss of function is allowed, provided the function is self-recoverable or can be restored Performance by the operation of the controls.

Criterion C:

6.2 **ESD**

Test Requirement: EN 61000-6-1: 2007 Test Method: IEC 61000-4-2:2008

Test Date: Nov 20, 2010 Discharge Impedance: $330 \Omega / 150 pF$

Discharge Voltage: Air Discharge: ±8 kV

> Contact Discharge: ±4 kV HCP: ±4 kV VCP: ±4 kV

Polarity: Positive & Negative

Number of Discharge: Minimum 10 times at each test point for Contact and VCP

Discharge; Minimum 10 times at each test point for Air Discharge

Discharge Mode: Single Discharge Discharge Period: 1 second minimum

6.2.1 E.U.T. Operation

Operating Environment:

Temperature: 23.0 °C Atmospheric Pressure: 1007 mbar Humidity: 49% RH

EUT Operation: The EUT is in representative work mode.
